

## Reasons to switch to cloud software - why our clients love working in the cloud

### Live Bank Feeds

No more wasted time downloading bank statements and re-typing your details back into your software - live daily bank feeds are accurate and up to date - see your true cash position in real time.

### Access your data anywhere

Run reports, send sales invoices, check who owes you money - any location, on any device.

### Less Typing - More Doing

Automated bank reports, bank rules, repeating automated sales invoices, even automated bank postings with add ons like Go Cardless - spend less time doing your books, leaving you more time to run your business.

### Control that Credit!

Always know who owes you money, what is overdue and even use automated credit control features to chase your debts. At the same time make it easier for your customers to pay you by adding online payment buttons to your sales invoices or set up direct debit collection with one of the cloud add ons.

### Daily Dashboard View

Open the software to see the Dashboard - a current view of cash and bank balances, who owes you and what you owe - no need to run endless reports - quick, easy - ready for business.

### Bin the filing cabinet

Paperless is becoming a real possibility - attach copies of you purchase invoices and receipts straight into your software and bin the original. Wherever you go you will always have the invoice details to hand.

### See the BIG picture - drill down to the detail

Beautiful reports, departmentalising your business in one clean report (clients have moved from traditional desktop software to cloud for this feature alone). Totally drillable down to the individual transaction - with copies of the paper invoice attached. You have accounts in a format you can understand and use.

### Work with us in the Cloud - greater service at the touch of a button

We pride ourselves on working closely with our clients, but when we work in the cloud things get even better - instant access to help you with queries (no more emailing backups), helping with day to day issues, month end or quarter end reviews - get professional advice and experience to let your business shine.
